FOR IMMEDIATE RELEASE

Muse Research Announces Support for FXpansion Percussion Plug-ins

Support for DR005, DR008 and BFD virtual drum modules

San Francisco, CA. October 28, 2004—Muse Research, Inc. today announced that it will ship the complete FXpansion line of percussion virtual instruments on their Receptor VST plug-in player version 1.0.1 update and will be demonstrating them at the 117th AES show. DR005 is a nicely featured drum program that is provided FREE to Receptor customers. DR008 is a very powerful drum and percussion synthesizer with many advanced features making it a highly desirable, fully featured. Finally, BFD is their premier drum plug-in, featuring over 9GB of sounds with seven different complete drum kits, all meticulously recorded and prepared for instant manipulation with its extensive built-in mixer section. All Receptor owners can download the DR008 or DR005 plug-ins from the www.plugorama.com website and try them free for 30 days.

DR005 and DR008 bring great drum sounds to Receptor at a bargain price.

DR-005 is a nicely featured drum and percussion plug-in that is available FREE when you register your Receptor on www.plugorama.com. DR005, a \$79 value. DR-008 is an extremely powerful tool for generating and arranging drum and percussion sounds, one shot samples and rhythm patterns in Receptor. The intuitive and streamlined user interface makes creating your own sound palettes incredibly quick. A huge choice of different sampling and synthesis algorithms gives you unprecedented control over your drum sounds; with 96 instrument slots DR-008 is quite simply the most advanced and capable software drum module on the market. DR008 is available for purchase on the www.plugorama.com website for only \$99, making it a remarkable value.

BFD Features 9GB of amazing drum sounds

FXpansion has distinguished itself as being a major player in the plug-in market, and its BFD drum plug-in has captured the market by storm due to its incredible library of sounds and the unparalleled ability to create just the right mix. BFD features an unparalleled degree of realism, with each drum sampled with as many as 46 velocity levels for the ultimate in detail and expressiveness.

Receptor the ideal tool for drummers and producers requiring FXpansion software
FXpansion's BFD has become the "must have" drum plug-in among top producers and musicians around the world. Only problem is that the program requires a significant amount of computing power to run the program. Receptor allows you to run BFD in a portable form, allowing it to be easily taken from studio to studio or used live at gigs.
